🏛️ Smart Complaint Management System (SCMS 2.0)

Complete Screen Recording & Presentation Script (Voice & Visual Guidance)

Target Duration: ~8–9 Minutes | **Tone:** Confident, Technical & Clear | **Focus:** Problem, AI Triage, SLAs, Kanban, Multi-Role Dashboards

Section 1: Introduction & Problem Statement

0:00 – 1:15

🖥️ **WHAT TO SHOW ON SCREEN:**

Start on the **Login Page** (`http://localhost:5173/login`). Keep the cursor steady, pointing at the branding title and feature pills.

🗣️ **WHAT TO SAY:**

"Hello everyone! Today, I am excited to demonstrate my project: the **Smart Complaint Management System**, or **SCMS 2.0**.

In traditional municipal governance and civic grievance systems, citizens often face several major roadblocks: complaints get lost in long queues, there is no automatic prioritization for dangerous emergencies, citizens lack transparent status tracking, and municipal administrators struggle with manual ticket assignment.

To solve this, I designed and built this full-stack, AI-powered civic grievance resolution platform. It combines **real-time AI triage**, **dynamic SLA deadline calculation**, a **live drag-and-drop Kanban workflow**, and **three distinct role-based portals**: Citizen, Municipal Admin, and Field Staff.

The frontend is built using **React 18**, **Vite**, and **Tailwind CSS**, while the backend is powered by **Node.js** and **Express.js**

with RESTful endpoints and persistent data storage. Let's jump into the demo!"

Section 2: Authentication & Role Selection

1:15 – 2:00

🖥️ **WHAT TO SHOW ON SCREEN:**

Click between the **Citizen**, **Admin**, and **Field Staff** role cards on the login screen. Point out how the name and email dynamically adjust. Select **Citizen** (Asmit Kumar) and click **"Launch Citizen Portal"**.

🗣️ **WHAT TO SAY:**

"Here on the landing and login screen, users can select between three specialized roles:
1. The **Citizen**, who files and tracks grievances.
2. The **Municipal Admin**, who has overarching control, Kanban triage, and reports.
3. And the **Field Staff**, who receives and resolves issues on-ground.

Notice that we also have seamless role-switching directly in the app. Let’s start by logging in as a **Citizen**."

Section 3: Citizen Dashboard & Real-Time AI Complaint Filing

2:00 – 4:00

🖥️ **WHAT TO SHOW ON SCREEN:**

1. Land on Citizen Dashboard. Point to welcome banner and KPI cards.
2. Click **"Submit New Complaint"**.
3. Type Title: "*Broken transformer sparking near school entrance*".
4. Type Description: "*A high voltage wire snapped after the storm. Sparks are flying near the main gate where children cross.*"
5. Pause and point out the **AI Auto-Classification card** updating live!
6. Click **"Submit Ticket"** and show it at the top of the table.

🗣️ **WHAT TO SAY:**

"Now we are inside the Citizen Portal. At the top, the dashboard greets the citizen with live grievance counts—showing how many are pending, in progress, or resolved.

[Click Submit New Complaint]

Now, let's look at one of the flagship features of this system: **Real-Time AI Auto-Triage**. Watch what happens as I type: 'Broken transformer sparking near school entrance'.

[Point to AI preview box]

Notice this box below! Even before I submit, the system's text analysis engine evaluates the grievance in real-time. It extracted keywords like *#electrical* and *#critical_hazard*, categorized it under **Electrical**, and assigned an urgency of **Critical** with a priority score of **95 out of 100**.

This eliminates citizen misclassification and ensures emergency hazards are immediately fast-tracked. Let's submit this ticket.

[Click Submit Ticket]

> Instantly, the ticket is registered with an auto-generated tracking ID, initial audit timeline, and calculated emergency SLA."

Section 4: Citizen Tracking, Audit Timeline & Feedback

4:00 – 5:00

🖥️ **WHAT TO SHOW ON SCREEN:**

1. Move mouse across table to show the cursor-following tooltip.
2. Click on a ticket to open the **Complaint Details Modal** with the audit timeline.
3. Close modal, find a **Resolved** ticket, click **"Feedback"**, rate 5 stars with a short review, and submit.

🗣️ **WHAT TO SAY:**

"Citizens don't have to guess where their complaint stands. Notice this interactive tooltip that follows the mouse cursor, showing the latest field update.

Clicking on any ticket opens the full **Resolution Audit Log & Timeline**. Citizens can see when the ticket was filed, when AI triage processed it, who it was assigned to, and every status change in chronological order.

Once a ticket is marked **Resolved**, citizens have access to a closed-loop review system. They can submit a 1 to 5-star rating and feedback, ensuring municipal accountability."

Section 5: Municipal Admin Control Center & Live Kanban

5:00 – 6:45

🖥️ **WHAT TO SHOW ON SCREEN:**

1. Switch to
Admin Dashboard
via navbar role switcher.
2. Highlight the KPI row (especially High/Critical SLA alert count).
3. Scroll to the
Kanban Live Board
.
4.
Drag a card
from *Pending* to *In Progress*, and another into *Resolved*.
5. Open a card, assign a technician (e.g., Officer V. Kumar), and write an internal note.
6. Switch to the
Table Register
tab and test the Search bar and Department filter.

🗣️ **WHAT TO SAY:**

"Now, let's switch perspectives to the
Municipal Admin Control Center
.

The municipal administrator oversees all municipal wards. Notice the KPI row: here we have immediate visibility into how many grievances are pending, under active work, or breaching critical SLAs.

Below is our
Interactive Live Kanban Board
, split into four stages: Pending Triage, In Progress, Escalated / High SLA, and Resolved.

[Drag a card from Pending to In Progress]
Using native HTML5 drag-and-drop, an administrator can simply drag a complaint from one column to another. The backend receives the update in real-time, appends an audit event to the ticket's history, and syncs across all devices.

Clicking on any card allows the admin to assign field engineers, adjust priorities, or write citizen-facing remarks. The administrator can also switch to the
Table Register
for quick multi-criteria filtering."

Section 6: Municipal Analytics, Reports & CSV Export

6:45 – 7:45

🖥️ **WHAT TO SHOW ON SCREEN:**

1. Click the **"Reports & Analytics"** tab in the Admin portal.
2. Point to Resolution Speed (14.2 hrs), CSAT Score (4.8/5.0), and SLA Compliance (94.8%).
3. Show the Department Workload progress bars & Status breakdown.
4. Click **"Export CSV"** to demonstrate automated data export.

🗣️ **WHAT TO SAY:**

"For high-level decision-makers and municipal commissioners, SCMS provides a dedicated **Reports & Analytics** module.

Here, key operational metrics are aggregated in real-time:
• First, the **Average Resolution Speed**, tracking turnaround time.
• Second, the **Citizen Satisfaction Score (CSAT)**, calculated directly from citizen reviews.
• Third, the **SLA Compliance Rate**, measuring whether emergency tickets are met within their 2-hour or 12-hour targets.

Below, we have department workload distribution across Public Works, Electrical, Water Supply, and Sanitation.

And with one click on the **Export CSV** button, administrators can export the entire complaints ledger for offline auditing or government reporting."

Section 7: Field Staff Action Queue & Theme Toggle

7:45 – 8:30

🖥️ **WHAT TO SHOW ON SCREEN:**

1. Switch to **Staff Portal** via top role switcher.
2. Show the assigned task cards with progress steppers.
3. Click **"Update Status"**, select **Resolved**, add remarks: "*Repair completed and tested safe.*" and save.
4. Toggle **Dark Mode / Light Mode** using the navbar Moon/Sun button.

🗣️ **WHAT TO SAY:**

"Next is the **Field Staff Portal**, designed for technicians and field engineers on mobile or tablets.

Staff members only see tickets dispatched to their division. Each card has a visual progress stepper and a quick status update form. When a technician finishes fixing an issue, they can immediately update the status to Resolved and log their field notes.

[Toggle Dark / Light Mode]

Additionally, the entire application has full **Dark Mode and Light Mode** support, persisted in local storage for comfortable viewing in both night and daytime conditions."

Section 8: Summary & Conclusion

8:30 – 9:00

🖥️ **WHAT TO SHOW ON SCREEN:**

Return to the **Admin Dashboard Kanban** view or the project **GitHub Repository**. Look at the camera or give a clean closing display.

🗣️ **WHAT TO SAY:**

"To wrap up, the **Smart Complaint Management System** bridges the gap between citizens and municipal authorities. By leveraging real-time AI classification, strict SLA timelines, role-based workflows, and interactive Kanban boards, it turns civic issue resolution into a transparent, accountable, and highly efficient process.

The project is open source and hosted on GitHub with cleanly separated frontend and backend services.

Thank you very much for watching! If you have any questions or feedback, I'd be glad to discuss them."

💡 Recording Pro-Tips for Maximum Marks & Impact:

- **Display Resolution:** Record in 1920x1080 (1080p) full screen.
- **Pacing:** Keep your speaking pace steady and pause 1–2 seconds when switching tabs so viewers can digest the screen.
- **Preparation:** Make sure both backend (port 3000) and frontend (port 5173) are running beforehand so there is zero latency.
